IJR, Inc. Adds Remanufactured HP02 Inkjets to Product List

PHOENIX, Arizona – IJR, Inc. is once again growing its Performance Plus+ remanufactured inkjet line with the addition of the ever-popular HP02 inkjet cartridge.

IJR's remanufactured HP02 inkjets offer a bonus feature that provides twice the ink per cartridge when compared with the OEM product. The release of these new cartridge platforms demonstrates the innovation and commitment that IJR brings to the Imaging industry. "We continually strive to provide the most cost effective products and saw the double capacity ink refill feature as an incredible advantage for our customers", said Bob Allen, president of IJR. "We're always excited to add new products to our inkjet line, and are particularly pleased to offer the added value of placing additional ink within the cartridge. Like all new cartridge introductions, we have spent a considerable amount of R&D on product testing and packaging. We believe the new HPO2 series will make a considerable contribution to the overall inkjet market".

The black cartridges are conveniently packaged to include two cartridges per unit. Color cartridge units include three cartridges per pack and are available in cyan, light cyan, magenta, light magenta, and yellow.

IJR, Inc. has thousands of clients worldwide and has been a leader in the remanufacturing of quality imaging supplies for more than 29 years.
